

# Stitch Count Estimator

This grid is a quick and easy way to estimate the number of stitches in a logo. Just place the grid over the artwork to be used. Count the number of one-cm squares it takes to cover the artwork in height and width. Then estimate visually the actual coverage of your logo as a percentage.

See the formula below to estimate the stitch count. Make sure you add stitches for any part of the design that has extra text over the filled areas.

Measurements to be aware of:

Min Text Size 5mm

Max Front of Cap: 55mm High by 110mm Wide

Be aware of internal pockets, existing panels and piping and other factors that may influence the position of your embroidered logo.

Cover this Grid over your logo  
or measure your logo in cm's - height and width  
Multiply the height and width to give the cm<sup>2</sup>.

Result: 9 x 9 = 81 cm<sup>2</sup>

Estimate just visually the coverage of this area.

60%

plus add on any extra percentage for stitching like text over existing fill embroidery

10%

Total: 70% Coverage

Stitch Count is (81x70%) x 200

Result: 11,340 stitches

Confidently Easy
